

David Murgulet

4th Year Computer Science Major

Portfolio | 604-353-4130 | davidgmurgulet02@gmail.com | [LinkedIn](#) | [GitHub](#)

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, JavaScript, TypeScript, CSS, HTML, PHP

Tools/Frameworks: Git, IntelliJ, VSCode, React, Node.js, Vue.js, MongoDB, Docker, AWS

Testing: JUnit, GDB, Mocha

PROJECTS

InsightUBC | *TypeScript, JavaScript, HTML, Bootstrap, Mocha*

September 2023

- Executed **Test Driven Design** for both black box and glass box testing using **Mocha** and **Chai** to develop a strong test suite
- Incorporated **Agile** process with a partner for a cohesive and effective approach to project delivery
- Utilized **JSZip** and **parse5** to access files and parse data to recover wanted information
- Implemented a **RESTful** server to query parsed information based on user inputs and display desired data to user
- Developed a full stack website using **TypeScript**, **JavaScript** and **HTML** to query files containing course and room information within UBC

HackBase | *PHP, HTML, SQL, Oracle*

April 2023

- Designed a hackathon **DBMS** using **PHP** to manage all hackathon properties and query hackathon information based on user inputs
- Used **SQL** to implement multiple database tables and queries for filtering hackathon data
- Managed data within **Oracle** database and utilized API requests to retrieve and update information
- Backend communication with database was implemented using **PHP**, as well as **SQL**
- Basic functions such as adding hackers to hackathons, or viewing tables can be done through the GUI

Study Spots | *JavaScript, React, MongoDB, NoSQL, Bootstrap*

January 2023

- Developed a full stack website using **React** to allow students to browse and create reviews for study spots within UBC
- Constructed a **NoSQL** database using **MongoDB Atlas** to store and maintain information for study spots and their reviews
- Implemented a backend on **Node.js** which utilized a server to process and recover requested information to web users onto the frontend
- Designed a fully functional frontend using **React Bootstrap**.

Around the World | *JavaScript, React*

November 2022

- Developed a web application with **React** and **JavaScript** that allows users to explore new locations of the world and plan possible airline flights to those locations
- Utilized a flight data **API** to request and retrieve information that would be displayed on the interface
- Implemented a system that generated random locations to increase variety within the application

EXPERIENCE

Sander

June 2022 – August 2022

Sofo Kitchens

- Sanded cabinet parts in preparation for finishing and final assembly
- Assisted in delivery of finished products as well as cabinet assembly
- Communicated efficiently with coworkers to avoid manufacturing errors and streamline the manufacturing process

SFU Camps Volunteer

July 2019 - August 2019

SFU Summer Camps

- Collaborated with camp supervisor in order to keep camp activities running efficiently throughout the day
- Assisted in the guidance of educational classes for the campers
- Watched over a small group of campers on outside field trips, taking a leadership role independently from the camp supervisor

EDUCATION

University of British Columbia

Expected in April 2025

Bachelor of Computer Science
